Canadian Data Report of Fisheries and Aquatic Sciences No. 465

84-4182/

Canadian Data Report of Fisheries and Aquatic Sciences

These reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of Data Reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries management, technology and development, ocean sciences, and aquatic environments relevant to Canada.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was changed with report number 161.

Data Reports are not intended for general distribution and the contents must not be referred to in other publications without prior written clearance from the issuing establishment. The correct citation appears above the abstract of each report.

Rapport statistique canadien des sciences halieutiques et aquatiques

Ces rapports servent de base à la compilation des données de classement et d'archives pour lesquelles il y a peu ou point d'analyse. Cette compilation aura d'ordinaire été préparée pour appuyer d'autres publications ou rapports. Les sujets des Rapports statistiques reflètent la vaste gamme des intérêts et politiques du Ministère des Pêches et des Océans, notamment gestion des pêches, techniques et développement, sciences océaniques et environnements aquatiques, au Canada.

Les numéros 1 à 25 de cette série ont été publiés à titre de Records statistiques, Service des pêches et de la mer. Les numéros 26-160 ont été publiés à titre de Rapports statistiques du Service des pêches et de la mer, Ministère des Pêches et de l'Environnement. Le nom de la série a été modifié à partir du numéro 161.

Les Rapports statistiques ne sont pas préparés pour une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au haut du résumé de chaque rapport.

ABSTRACT

Ash, E.G.M., and R. J. Tucker. 1984. Angled catch and effort data for Atlantic salmon in Newfoundland and Labrador, and for other fishes in Labrador, 1982. Can. Data Rep. Fish. Aquat. Sci. 465: xv + 96 p.

In Newfoundland and Labrador in 1982, the effort in the recreational salmon fishery increased by 6% to 135,769 rod days from 127,674 rod days in 1981. This additional effort did not increase the total catch, in fact both the numbers of grilse and large salmon decreased by 11% and 1% respectively. The provincial total of 47,844 was comprised of 45,975 grilse and 1,869 large salmon. This resulted in an overall CPUE of 0.35, somewhat lower than 0.42 recorded in 1981. The only increase other than effort was a 19% rise in the catch of large salmon in Labrador.

RÉSUMÉ

Ash, E.G.M., and R. J. Tucker. 1984. Angled catch and effort data for Atlantic salmon in Newfoundland and Labrador, and for other fishes in Labrador, 1982. Can. Data Rep. Fish. Aquat. Sci. 465: xv + 96 p.

À Terre-Neuve et au Labrador, l'effort de pêche sportive du saumon à la ligne est passé de 127 674 jours de pêche en 1981 à 135 769 en 1982, soit une augmentation de 6%. Cet effort supplémentaire n'a pas généré une augmentation des prises totales: au contraire, le nombre de madeleineaux et de gros saumons a baissé respectivement de 11% et de 1%. Au total, 47 844 poissons ont été capturés, dont 45 975 madeleineaux et 1 869 gros saumons. La PPUE globale ainsi généré s'est élevée à 0,35, valeur quelque peu inférieure à celle enregistrée en 1981 (0,42). Une augmentation de 19% des prises de gros saumons au Labrador a été en plus de l'effort, le seul facteur en hausse.

PART I

Atlantic Salmon, Insular Newfoundland and Labrador

INTRODUCTION

This is the tenth annual angling data report published since 1973 by the Freshwater and Anadromous Fish Program (Button and Wells 1974, 1975; Moores 1976; Moores et al. 1977, 1978; Moores and Tucker 1978, 1979, 1980; Moores and Ash 1981; Ash 1982). The data are provided by the Resource Management Branch, Department of Fisheries and Oceans, Newfoundland Region. Data include both an observed or known fishing effort and catch, and an estimated quantity. The observed census data are normally collected by seasonal river guardians during surveillance of the annual Atlantic salmon migration. The data are submitted to the fisheries officer or warden who, in consultation with the guardian, estimates the catch and effort that occurred but were not observed. Normally factors such as manpower, patrol time, angling pressure, weather, river conditions and personal knowledge of the salmon migration are used to determine the estimated quantities. The angling pressure and accessibility to the rivers had increased to such a degree during the 1970's that observation and recording of total effort and angling catch had become impossible. The addition of the estimated quantity was incorporated into the angling data in 1974 to provide consistency in the reporting.

This report also includes calculated catch-per-unit-effort (CPUE). The CPUE, defined as the number of fish angled per rod day (a rod day being a day or any part thereof in which an individual angles) is one of the important tools used to assess the condition of not only the total Atlantic salmon stock, but individual populations as well. It is especially valuable for early detection of declines in fish populations that would otherwise appear healthy from high catch statistics which are disguised by increases in effort.

The format of the 1982 report is similar to that of previous years. The data are presented by rivers, statistical sections, statistical areas and Fishing and Industry Areas (Fig. 1 and 2). Rivers are tabulated according to their assigned seven digit code (Waldron 1974) which commence at Cape Norman on the northern tip of the Great Northern Peninsula and proceed consecutively and clockwise around insular Newfoundland and into Labrador. The seven digit codes, developed for quick identification and location of rivers as well as for computer coding, denote not only the individual river numbers but also the statistical section (developed by the Economics Branch in 1968) in which the mouth of the river is located. For example: Humber River is coded 4402430. The number 44 indicates the statistical section and the 02430 is the individual river number.

Data are broken down by weekly effort and catch and include number of grilse (2.7 kg), number of salmon (2.7 kg), and weight of largest fish caught. Angled catch represents only upstream migrants or bright salmon. There is no kelt or black salmon fishery in Newfoundland or Labrador.

Open season for Atlantic salmon angling in Newfoundland and Labrador extends from June 10 to Sept. 15. However, because the timing of migration differs considerably on some rivers and to ensure that adequate spawners reach the spawning grounds the opening and closing dates vary. The open season dates for all scheduled rivers during 1982 are listed (Table 1).

Scheduled rivers may have to be closed periodically for reasons such as low water, research, enhancement, conservation, etc. This requires changes to the Newfoundland Fishery Regulations. These notices of change are "Variation Orders". During 1982 the following variation orders were issued.

ORDER VARYING THE CLOSED TIME FOR FISHING FOR SALMON IN CERTAIN WATERS ADJACENT TO THE PROVINCE OF NEWFOUNDLAND

Short Title

1. This Order may be cited as the "Newfoundland Region Closed Time Variation Order", 1982-21.

Variation

2. The closed time as fixed by subsection 45(1) of the Newfoundland Fishery Regulations and set out in Item 3 of Schedule V thereto is hereby varied so that no person shall fish for salmon with nets, traps or any other commercial fishing appliance during the period beginning on January 1 and ending on May 17.

Coming Into Force

3. This Order shall come into force on the 14 day of May, 1982 and remain in force until the 31 day of December, 1982.

ORDER VARYING THE CLOSED TIME FOR ANGLING IN THE COLINET RIVER

1. This Order may be cited as the "Newfoundland Region Closed Time Variation Order", 1982-27.

Variation

2. The closed time as fixed by subsection 13(2) of the Newfoundland Fishery Regulations and set out in Item 1 of Schedule III thereto is hereby varied so that no person shall angle in the Colinet River including the north and east branches (Item 103 of Schedule I) during the period beginning on June 20, 1982 and ending on June 19, 1983.

Coming Into Force

3. This Order shall come into force on the 20th day of June, 1982 and remain in force until June 19, 1983.

ORDER VARYING THE CLOSED TIME FOR ANGLING IN THE TOP POND BROOK

Short Title

1. This Order may be cited as the "Newfoundland Region Closed Time Variation Order", 1982-46.

Variation

2. The closed time as fixed by subsection 13(2) of the Newfoundland Fishery Regulations and set out in Item 1 of Schedule III thereto is hereby varied so that no person shall angle in that portion of Grandy's River known as Top Pond Brook (Item 145 of Schedule I) during the period beginning on August 14, 1982 and ending on June 19, 1983.

ORDER VARYING THE CLOSED TIME FOR ANGLING IN THE STONEY BROOK

Short Title

1. This Order may be cited as the "Newfoundland Region Closed Time Variation Order", 1982-47.

Variation

2. The closed time as fixed by subsection 13(2) of the Newfoundland Fishery Regulations and set out in Item 1 of Schedule III thereto is hereby varied so that no person shall angle in that portion of Exploits River known as Stoney Brook (Item 67 of Schedule I) during the period beginning on August 14, 1982 and ending on June 19, 1983.

Coming Into Force

3. This Order shall come into force on the 14 day of August, 1982 and remain in force until June 19, 1983.

ORDER VARYING THE CLOSED TIME FOR ANGLING IN THE NORTH WEST BROOK

1. This Order may be cited as the "Newfoundland Region Closed Time Variation Order", 1982-48.

Variation

2. The closed time as fixed by subsection 13(2) of the Newfoundland Fishery Regulations and set out in Item 1 of Schedule III thereto is hereby varied so that no person shall angle from 200 yards downstream of the counting fence in the tributary of the Garia River known as North West Brook (Item 150 of Schedule I) during the period beginning on August 14, 1982 and ending on June 19, 1983.

Coming Into Force

3. This Order shall come into force on the 14 day of August, 1982 and remain in force until June 19, 1983.

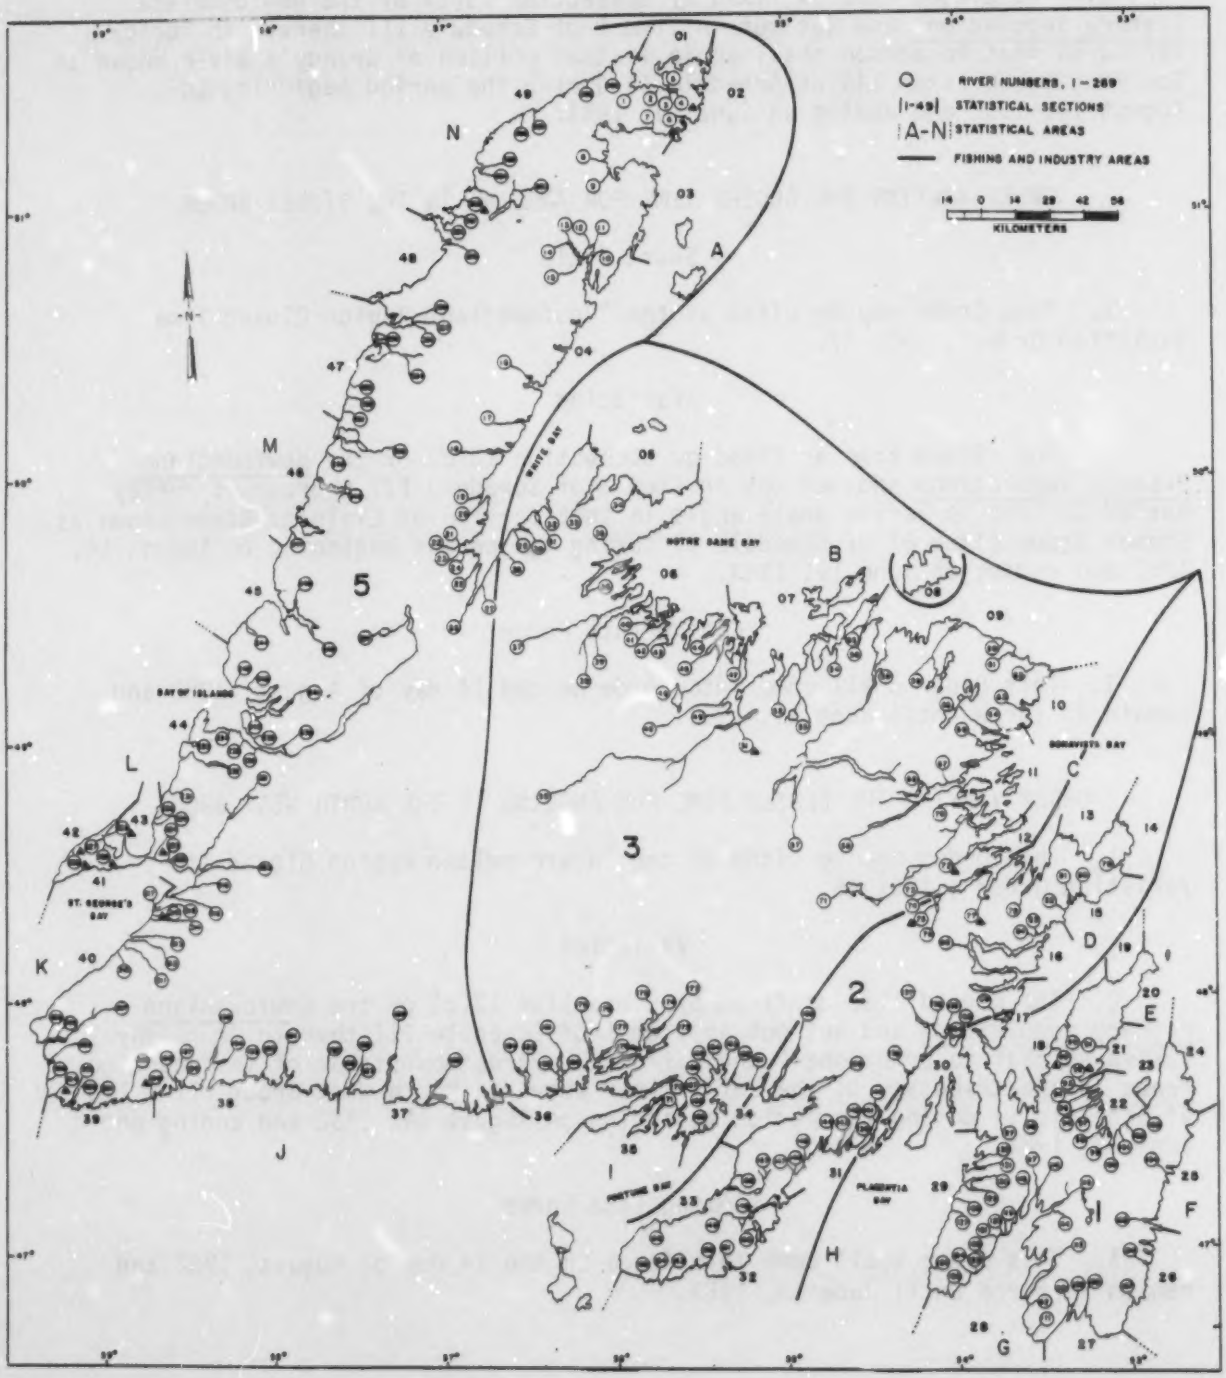

Fig. 1. Location of rivers in insular Newfoundland with existing and historic (A) Atlantic salmon populations. Boundaries of Fishing and Industry areas, statistical areas and statistical sections are also indicated.

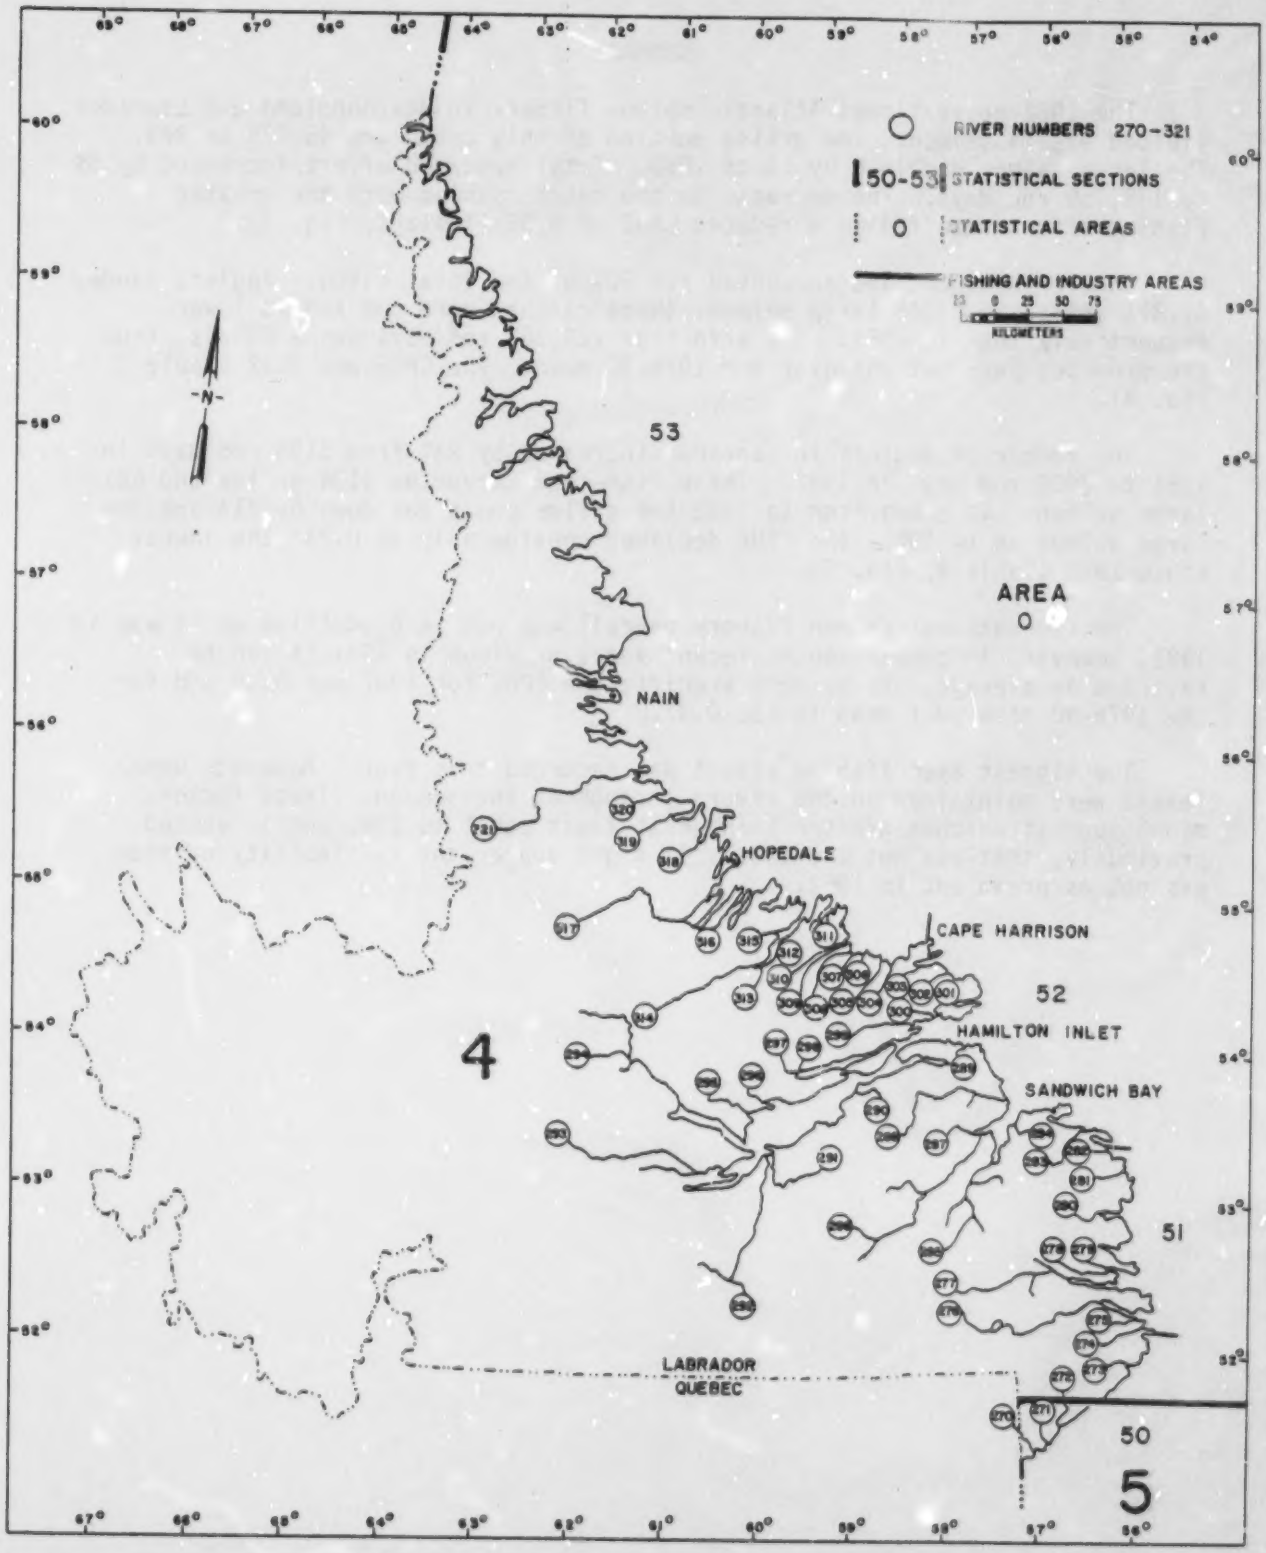

Fig. 2 Location of rivers in Labrador with existing Atlantic salmon populations. Boundaries of Fishing and Industry areas, statistical areas and statistical sections are indicated.

SUMMARY

The 1982 recreational Atlantic salmon fishery in Newfoundland and Labrador yielded 47,844 salmon. The grilse portion of this catch was 45,975 or 96%. The large salmon declined by 1% to 1869. Total recorded effort increased by 6% to 135,769 rod days. The decrease in the catch coupled with the greater fishing effort resulted in a reduced CPUE of 0.35 (Table 2, Fig. 3).

Insular Newfoundland accounted for 90% of the total catch. Anglers landed 41,871 grilse and 1248 large salmon; these catches were 10% and 9% lower respectively than in 1981. The effort of 129,369 rod days was a 5% rise from the previous year but 26% over the 1976-80 mean. The CPUE was 0.32 (Table 3, Fig. 4).

The number of anglers in Labrador increased by 23% from 5198 rod days in 1981 to 6400 rod days in 1982. These fishermen harvested 4104 grilse and 621 large salmon. In comparison to 1981 the grilse count was down by 21% and the large salmon up by 19%. The CPUE declined considerably to 0.74; the lowest since 1978 (Table 4, Fig. 5).

The recreational salmon fishery overall was not as productive as it was in 1981, however, in comparison to recent years previous to 1981 it can be regarded as average. To be more specific the CPUE for 1982 was 0.35 and for the 1976-80 five year mean it was 0.37.

The highest ever fishing effort was recorded this year. Moderate water levels were maintained in the rivers throughout the season. These factors might suggest catches greater than or at least equal to 1981 but as stated previously, that was not the case. It might appear the availability of fish was not as prevalent in 1982.

Acknowledgments

We thank the field staff of Resource Management Branch for collecting the data, Economics Branch for assistance in data processing, the keypunch operators of Statistics and Computing Services, Neil Hefford for drafting, K. Harding and P. Doyle for typing and also T. R. Porter for editing.

Part II

Arctic Charr, Brook Trout and other fishes

Introduction

During the years previous to 1982 little attention was given to compiling catch and effort statistics for species other than Atlantic salmon. However, attempts are being made to change this practice. In 1982 weekly angling report books were sent to all sport fishing camps to record this information. The response received from the camp operators was good. One problem which occurred was that the catch was recorded in some instances by weight and in others by numbers. For the coming year this will be standardized.

There are eighteen rivers from which data have been collected. The locations are identified on the Labrador Map (Fig. 6). These rivers are as follow:

Map #	River Name
1	Pinware River
2	St. Mary's River
3	Alexis River
4	Shinneys Waters
5	Gilbert River
6	Minipi Lake
7	Ann-Marie Lake
8	[illegible]e River
9	Sandhill River
10	Eagle River
11	Igloo Lake
12	Double Mer Brook
13	St. Michaels River
14	Big River
15	Marble Lake
16	Hunt River
17	Clyho Lake
18	Flowers River

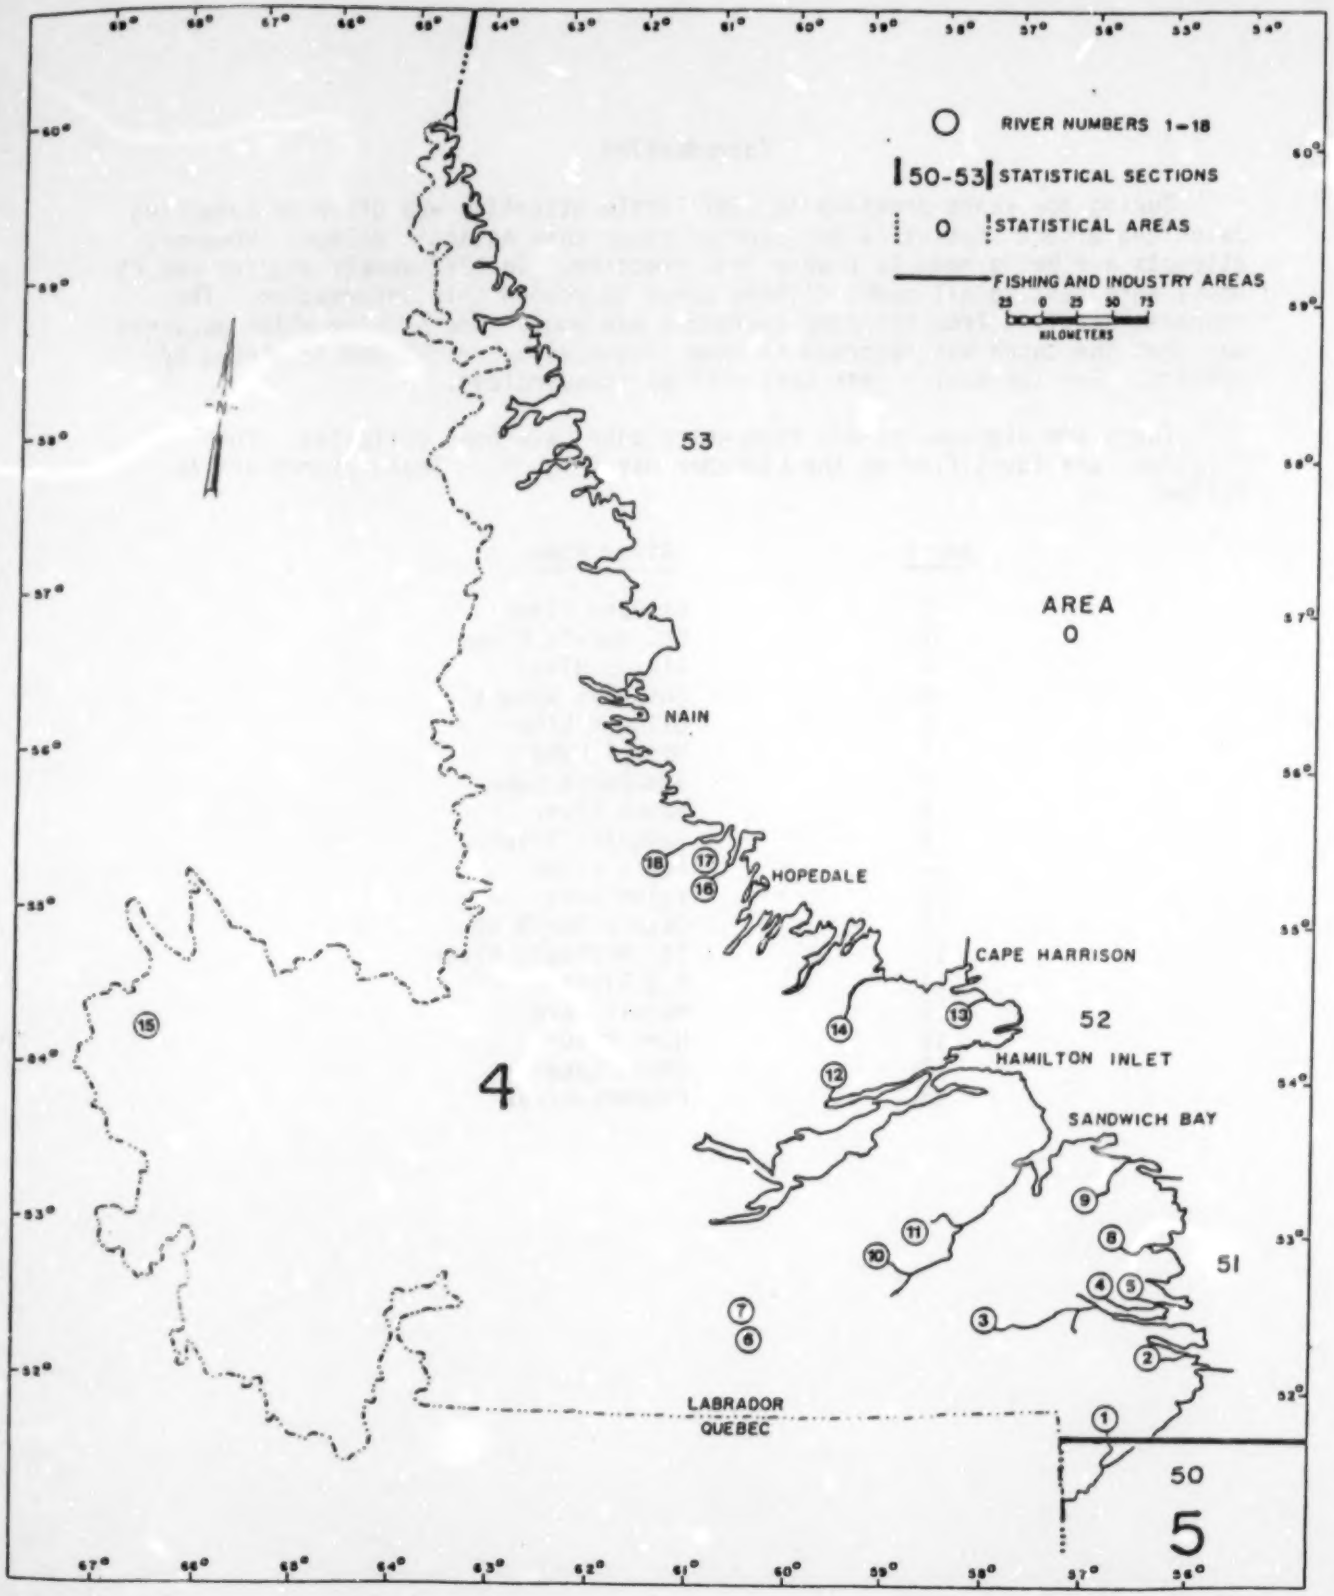

Fig. 6. Locations of commercial sport fishing camps in Labrador, where data were collected in 1982.
